S-Bright Pickling and Passivation Chemicals

Introducing S-Bright Pickling and Passivation Liquid, a revolutionary duo that transforms Metal surfaces to their utmost brilliance.

The combined action of S-Bright Pickling and Passivation Chemicals delivers a synergistic effect:

Pickling removes surface contaminants, such as oxides and mill scale, while Passivation forms a thin, protective oxide layer that enhances corrosion resistance.

- Impeccable Surface Finish
- Enhanced Corrosion Resistance
- Extended Component Lifespan
- Improved Aesthetic Appeal

Pickling / Passivation bath

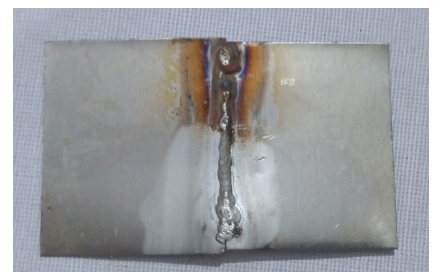

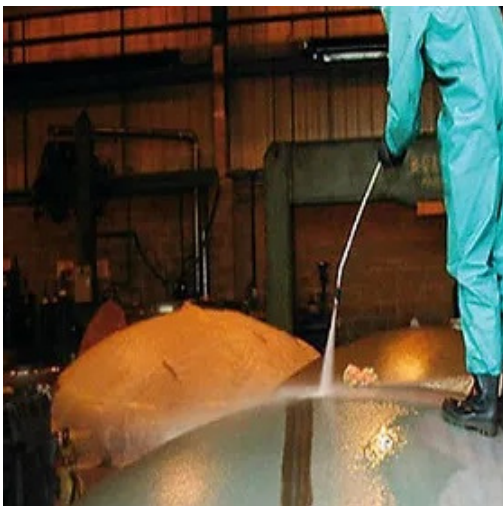

Nandira[®]
Chemicals

S-Bright Pickling and Passivation Chemicals are designed for user-friendly application, adhering to strict safety standards:

Comprehensive application guidelines to ensure proper usage

- **Pickling solution** - Dip your components in a Pickling bath for 10 to 15 minutes depending on the metal grade.
- **Passivation chemical** - The passivation chemical can be applied by spraying, brushing or dipping action as per the requirement of job.
- **Proper safety measures and use of PPE safeguards user health.**

Can be applied by dipping/ spraying/ brushing
